EXPERIENCE

Credit Risk Modelling Manager, Gini Mar 2026 - Present

- Coordinated delivery of an independent validation of a Pillar 2A credit concentration risk capital model, managing two consultants across eight work streams to a supervisory submission deadline and closing 38 observations, 87 per cent of which the bank accepted.
- Initiated and built the firm's internal AI capability and led it to firm-wide adoption: 76 reusable agent skills with automated guardrails and eval suites, and a research knowledge base of over 1,500 graded credit risk and regulatory sources.

Credit Risk Modelling Manager, Deloitte UK

Apr 2025 - Feb 2026

- Supported development and documentation of A-IRB credit risk models for Tier 1 UK banks, ensuring PRA/ECB compliance.
- Designed a Python-based credit risk code library, streamlining IFRS 9/IRB workflows and advancing it towards commercialisation.

Data Science Consultant

Dec 2024 - Apr 2025

Senior Actuarial Associate, PwC South Africa

Jan 2023 - Sep 2024

- Co-developed a first-of-its-kind statistical Strategic Workforce Planning application, now used across the mining, energy, education and financial services industries.

Actuarial Associate, PwC South Africa Jan 2021 - Dec 2022

- Validated an XGBoost PD model and built a Power BI dashboard to visualise portfolio trends and outputs for IFRS 9 reporting.
- Performed independent LGD modelling utilising SQL, Python and SAS, while project managing and leading junior team members.
- Supported the testing of a PD model built using a Cox proportional hazard approach. Calibrated an EAD model with limit increase effects.

Professional Swimmer

Jan 2014 - Dec 2020

- Competed internationally at two FINA World Championships.

PROJECTS

Ad campaign modelling

Fount | 2025

Developed and validated GLMs on Facebook/Google marketing data for US insurers to evaluate performance across regional and demographic dimensions.

Crop yield modelling

Agnify | 2024

Developed time series forecasts to predict crop production trends, enabling data-driven planning at farmer, state, and national levels.

SUMMARY

Actuary specialising in credit risk, with six years building and validating the models banks hold capital against, across IRB, IFRS 9 and Pillar 2. Works as readily on a regulatory framework as on the statistics underneath it and the code that produces the numbers. Alongside delivery, builds the tooling that keeps it consistent: shared model libraries, automated guardrails and a graded research base now used across the firm. Sectors span banking, insurance, the public sector and agriculture. In my spare time I play tennis, explore restaurants, go to Catholic seminars and watch sports.
